INTRODUCTION

Bulletin 33, Geological Survey of Ohio, consists of two parts: *first*, a map of the State showing the location of the industries; and *second*, the names and addresses of the operating firms. Frequent requests have been received for information of this sort and consequently a welcome is forecast for this publication.

The information has been received from various sources. For the oil and gas producing areas the Survey is indebted to the Ohio Oil Co. and the Ohio Fuel Gas Co., and for the location of coal mines to the Deputy Inspectors of Mines. The National Lime and Stone Co. gave much assistance in its field. Professor J. E. Hyde sent in maps showing the principal sand and gravel pits in the Cleveland district. Professor H. E. Nold assisted in the location of clay plants. Numerous city engineers located sand and gravel pits in their territory.

For the list of coal operators the Survey is under great obligations to the Division of Mines, Department of Industrial Relations; and in like manner to the Division of Labor Statistics of the same department for names and addresses of producers of oil and gas and of drillers for these fuels.
